PROFESSIONAL SUMMARY

Final-year Electronics and Communication Engineering student (CGPA: 8.59) with strong interest in software development, Python programming, and machine learning. Recognized as the *Best Outgoing Student* for outstanding academic performance and overall excellence. Experienced in designing and implementing data-driven applications and AI-based systems with a solid foundation in data structures, algorithms, and problem-solving. Demonstrated ability to build efficient, scalable, and user-focused solutions through academic projects and internships.

SKILLS

Programming Languages and Database: Python, C, SQL
Core Computer Science: Data Structures, Algorithms, Operating Systems, Problem Solving
Machine Learning: Model development, data preprocessing, feature engineering, inference systems
Tools & Technologies: Git, GitHub,
Web Technologies: HTML, CSS

PROJECTS

CropNexa 2.3 - AI-Based Farm Assistant

- Developed a machine learning-based crop and disease detection system using image classification techniques to improve agricultural decision-making.
- Built an offline-capable prediction pipeline integrated with real-time environmental and weather data for reliable performance in low-connectivity areas.
- Designed and implemented a multilingual and user-friendly interface to enhance accessibility and usability for diverse users.

Underwater Communication System

- Designed a hybrid communication model to enable reliable underwater data transmission in high-attenuation environments.
- Improved signal stability and communication efficiency through system-level optimization and performance tuning techniques.
- Conducted analysis of system behavior under noise and environmental constraints to ensure robustness and reliability.

EXPERIENCE

Bharat Sanchar Nigam Limited

Jun 2024

- Analyzed telecom network architecture including routing, switching, and fault diagnosis mechanisms in real-time systems.
- Studied communication protocols, data flow, and infrastructure performance to understand large-scale network operations.

Adventure Technology Solutions Pvt Ltd

Jun 2025 – Jul 2025

- Developed machine learning models using Python on real-world datasets, improving predictive accuracy and efficiency.
- Enhanced dashboard performance through optimized data visualization techniques and improved user interface components.

ACHIEVEMENTS

- Winner — Smart India Hackathon 2025 (Software Edition), demonstrating strong problem-solving and development skills.
- Finalist — Enviro-Solvers Hackathon conducted by Tamil Nadu Pollution Control Board.
- Top 15 — HCL GUVI 24-Hour Hackathon

CERTIFICATIONS

- CISCO CCNA (Networking, Python, Cybersecurity)
- Infosys Springboard — Artificial Intelligence Fundamentals
- NPTEL — Machine Learning, Deep Learning, Computer Networks
